COMP9417: Homework Set #1

z5113817

University of New South Wales — June 17, 2021

Question 1

a)

We know from the normal equations for a the gradient of a minimised linear regression is:

$$\hat{\beta}_1 = \frac{\bar{XY} - \bar{X}\bar{Y}}{(\bar{X^2}) - (\bar{X})^2}$$

Which can expand into:

$$\hat{\beta}_1 = \frac{\frac{1}{n}\sum_{i=1}^{n}(X_i - \bar{X})(Y_i - \bar{Y})}{\frac{1}{n}\sum_{i=1}^{n}(X_i - \bar{X})^2}$$

So now substituting in the transformation, we get:

$$\hat{\beta}_1 = \frac{\frac{1}{n}\sum_{i=1}^{n}(\tilde{X}_i - \bar{X})(Y_i - \bar{Y})}{\frac{1}{n}\sum_{i=1}^{n}(\tilde{X}_i - \bar{X})^2} \tag{1}$$

$$\hat{\beta}_1 = \frac{\frac{1}{n}\sum_{i=1}^{n}(c(X_i + d) - \bar{X})(Y_i - \bar{Y})}{\frac{1}{n}\sum_{i=1}^{n}(c(X_i + d) - \bar{X})^2} \tag{2}$$

$$... \tag{3}$$

b)

Question 2

See Github repository here for all of the python code used in this question.

a)
